8-bit transparent D-Type Latch with 3-State Outputs in bare die form

Rev 1.0
10/03/21

Description

The 74HC373 consists of eight D-type transparent latches fabricated using a 2.5µm 5V CMOS process to combine high speed performance LSTTL performance with CMOS low power consumption. Each latch is equipped with separate D-Type inputs and 3-State outputs for bus oriented applications. Data output changes asynchronously and data may be latched even when the outputs are not enabled. Device inputs accept standard CMOS outputs or LSTTL outputs using pull-up resistors. All inputs are equipped with protection circuits against static discharge and transient excess voltage.

Features:

- Output Drive Capability: 15 LSTTL Loads
- Low Input Current: 1µA
- Outputs directly interface CMOS, NMOS and TTL
- Operating Voltage Range: 2V to 6V
- CMOS High Noise Immunity
- Function compatible with 74LS373.

Absolute Maximum Ratings¹

PARAMETER	SYMBOL	VALUE	UNIT
DC Supply Voltage (Referenced to GND)	V_{CC}	-0.5 to +7.0	V
DC Input Voltage (Referenced to GND)	V_{IN}	-1.5 to $V_{CC} + 1.5$	V
DC Output Voltage (Referenced to GND)	V_{OUT}	-0.5 to $V_{CC} + 0.5$	V
DC Input Current, per pad	I_{IN}	± 20	mA
DC Output Current, per pad	I_{OUT}	± 35	mA

Power Dissipation in Still Air ²	P_D	750	mW
Storage Temperature Range	T_{STG}	-65 to 150	$^{\circ}C$

1. Operation above the absolute maximum rating may cause device failure. Operation at the absolute maximum ratings, for extended periods, may reduce device reliability. 2. Measured in plastic DIP package, results in die form are dependent on die attach and assembly method.

3. This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high-impedance circuit. For proper operation, V_{IN} and V_{OUT} should be constrained to the range $GND \leq (V_{IN} \text{ or } V_{OUT}) \leq V_{CC}$. Unused inputs must always be tied to an appropriate logic voltage level (e.g., either GND or V_{CC}). Unused outputs must be left open.
