

Linear Voltage Regulator – 7812

Positive Fixed 12V Voltage Regulator in bare die form

Rev 1.1
19/02/24

Description

The 7812 12V fixed 3-terminal positive voltage regulator delivers up to 1.5A of output current with adequate heat-sinking. The device is equipped with internal limiting, safe-area compensation + thermal shutdown features for overload immunity. The 7812 can be used with external components to obtain adjustable voltages or currents & can also be used as the power-pass element in precision high-current voltage regulators. No external components are needed other than to enhance performance or increase design flexibility.

Features:

- $\pm 5\%$ V_{OUT} tolerance over entire temperature range
- Greater than 1A output current capability
- Internal thermal overload protection
- Internal short-circuit current limit
- Output capacitor not essential for stability
- Full Military temperature range
- Negative voltage complement is 7912

Ordering Information

The following part suffixes apply:

- No suffix - MIL-STD-883 /2010B Visual Inspection
- "H" - MIL-STD-883 /2010B Visual Inspection + MIL-PRF-38534 Class H LAT
- "K" - MIL-STD-883 /2010A Visual Inspection (Space) + MIL-PRF-38534 Class K LAT

LAT = Lot Acceptance Test.

For further information on LAT process flows see below.

Die Dimensions in μm (mils)

Supply Formats:

- Default – Die in Waffle Pack (100 per tray capacity)
- Sawn Wafer on Tape – On request
- Unsawn Wafer – On request
- Tape & Reel – On request
- In Metal or Ceramic package – On request

Mechanical Specification

| | | |
|------------------------|--|-----------------------|
| Die Size (Unsawn) | 1400 x1900 55 x 75 | μm mils |
| Minimum Bond Pad Size | 230 x 230 9.05 x 9.05 | μm mils |
| Die Thickness | 280 (± 20) 11.02 (± 0.79) | μm mils |
| Top Metal Composition | Al 1%Si 1.1 μm | |
| Back Metal Composition | Ti/Ni/Ag 1.2 μm | |

Pad Layout and Functions

| PAD | FUNCTION | COORDINATES (µm) | |
|--------------------------|------------------|------------------|------|
| | | X | Y |
| 1 | V _{IN} | -610 | 247 |
| 2 | GND | -610 | -626 |
| 3 | V _{OUT} | 372 | -560 |
| 4 | V _{OUT} | 372 | 247 |
| CONNECT CHIP BACK TO GND | | | |

Typical Application

C_i is required if the regulator is located an appreciable distance from power supply filter. C_o is not required for stability; however it does improve transient response. For optimum stability and transient response locate C_i C_o as close as possible to the regulator. A common ground is required between the input and the output voltages. The input voltage must remain typically 2.0 V above the output voltage even during the low point on the input ripple voltage.

| Avg. Output Voltage Temp. Coefficient | TCV_{OUT} | | - | -0.8 | - | mV/°C |

1. Operation above the absolute maximum rating may cause device failure. Operation at the absolute maximum ratings, for extended periods, may reduce device reliability. 2. Results in die form are dependent on die attach and assembly method. Max power dissipation is internally limited by the die.
