

# Dual Differential Comparator – LM193A

Low power, low offset voltage dual comparator in bare die form

Rev 1.1  
21/01/18

## Description

The LM193A is a dual precision voltage comparator operating with either single or split supply over a wide voltage range. In single supply operation, the device uniquely produces a common mode range-to-ground level. In split supply operation the low power supply current drain is independent of the magnitude of supply voltage and reduces power consumption versus standard comparators. The device directly interfaces TTL, CMOS and also interfaces MOS in split supply configuration. Offset voltage characteristics as low as 1mV improve efficiency and further reduce power consumption. The die size is one of the smallest in the industry.

## Features:

- Single-Supply range: 2-36V
- Split-Supply range:  $\pm 1.0V$  to  $\pm 18V$
- Very low supply current independent of supply voltage (1 mW/comparator at +5V)
- Very Low Current Drain
- Very Low Input Offset Current
- Low Input Offset Voltage
- TTL, DTL, ECL, MOS, CMOS compatible outputs
